

OPERATION:

The standard MacCorp Intensifier will operate automatically to accommodate any 8" stroke jar with a minimum release setting of 350lb and a maximum release setting of 2100 lb. The intensifier can be configured to accommodate other jar strokes and max/min settings. Please contact your MacCorp representative for other configurations.

After initial usage the Intensifier will develop some slack in the springs. Slack up to 2" is acceptable and will not affect performance. When slack becomes greater than 2" the springs should be replaced.

SPECIFICATIONS

Assembly Part Number:	WACC-1-875-00	WACC-1-500-00
